## A PIONEER IN ROOFING TECHNOLOGY

The MAGE® Herzberg Group is one of the leading manufacturers and distributors of roofing accessories and prefabricated building systems in Germany, Europe, Asia and North America.

Our global structure combines the benefits of a strong local presence with the advantages of a world-wide network of affiliated companies.

We utilize this structure extensively when it comes to research and development and the best possible sales coverage on a local and international level.

The ongoing exchange and partnership with our customers is the foundation of the successful development of our company. Since it has been established in 1993, the evolution of MAGE® Herzberg has always been influenced by an innovative pioneering spirit and the ambition to grow continuously with an international footprint.

Many of our products and patents were inspired by specific requirements and suggestions from our customers. Hence, the creation of pragmatic product solutions for all customer segments: industrial, retail, trade and craftsmen.

While providing the highest quality standards in all of our solutions, both the MAGE® and the branded products are characterized by their ease of installation and durability.

The patented developments of several full metal products for roof applications are impressive testimonials to the innovative strength and the pioneering spirit of MAGE® Herzberg.

Today we offer a broad range of more than 500 product solutions which prove their worth in daily use.

## WITH A WIDE RANGE OF SOLUTIONS

## INNOVATION MEETS RELIABILITY

### MILESTONES

- 2010 project »roof of the future«
- 2010 launch of the modular balcony system BALVARIO®
- 2009 with the roof insulation system ISOPUR® and the ventilated curtain façade made of aluminium we entered the business field of building insulation in Germany
- 2007 presentation of the first prefabricated dormer with integrated vacuum insulation in „passivhaus“ standard
- since 2006 production of prefabricated building systems: dormers, arched and pitched roofs
- 2000 MAGE®Flex - the first wall and chimney flashing tape made fully from metal
- 1995 GraFi®Roll - the first hip and ridge ventilation roll made fully from metal
- 1994 ALUVENTA® - the first ridge ventilation element made fully from metal

Ever since the start-up of the MAGE® Herzberg GmbH, two pillars of our company philosophy have built the foundation of our success. Our guiding principle »Innovation meets Reliability« drives us to the development of solutions which constantly exceed customer expectations in existing and emerging markets.

Our steady quest to develop innovative and marketable products reached a new unprecedented level with the development and market introduction of prefabricated

building systems, expanding the product range of our business segment »roof technology«.

Thus we address the needs of planners, architects, and building contractors to manufacture dormers based on individual planning data and built in a cost-saving industrial manner.

Unveiling the world's first prefabricated dormer with vacuum insulation in »passivhaus« standard (meeting the highest energy efficiency and conservation standards), manifests the claim of MAGE® as an

industry leader defining the environmental aspects of building technology.

Based on our long-standing experience, we continue to extend our offering in prefabricated building systems in order to present solutions for the entire building, both residential and commercial.

Current developments address the »roof of the future« as part of the protective and energy generating shell of the building.

### GROWING FROM ROOFING PRODUCTS TO SYSTEMS COVERING THE WHOLE BUILDING
